

2007072

Agenda for VBI70 Meeting  
June 26, 2001  
Denver, CO

Purpose: to resolve differences in estimating cancer risk for the VBI70 site and in estimating hot spots

- Agenda:
1. Introductions
  2. Changes/additions to the agenda
  3. EPA presents sample calculation of arsenic cancer risk for the VBI70 site using site-specific parameters
  4. Discussions concerning parameters in the cancer risk equation
    - A. Duration of exposure
      - 30 years of exposure versus lifetime exposure
    - B. Indoor dust
      - validity of EPA's whole house dust method for estimating exposure
    - C. Bioavailability of arsenic
      - response to ATSDR comments
      - recent results from bioaccessibility tests
  5. Soil-pica issues
    - A. Review of EPA's method for identifying 1,000 to 2,000 properties
      - Which intake soil rate and health guideline will EPA use
    - B. How to calculate a hotspot
    - C. Other components in risk equation
  6. Review of conclusions from the days discussions

Limit: all day
